

## **Durable & Reliable Wedge Wire Screen for Mining Applications**

From extraction to refining, there are many steps and applications in the process. The mining environment demands equipment that is not only durable and reliable but also assists in getting the job done efficiently.

Federal Screen manufactures the most comprehensive range of screens for refining applications including large diameter, one-piece construction wedge wire screens. Through superior product innovation and technology capability, Federal Screen provides wedge wire solutions that help lower operational and maintenance costs for mineral processors.

Wedge wire screens used in the mining/refining industry include:

- Shaker Screens for Slurry Filtration
- Froth Flotation Filters
- Carbon-in-Leach (CIL) and Carbon-in-Pulp (CIP) Interstage Screens for Gold and Silver Refining Process
- Sieve Bends & Static Screens for Dewatering
- Automatic Strainer Baskets
- Support Grids
- Water Treatment Nozzles and Pipe and Lateral Configurations
- Water Intake Screens

Federal Screen is committed to providing superior technical and design support as we strive to provide clients with money saving screen solutions. Contact our team of wedge wire experts to see how we can help with your next screen application and let us be your trusted technical resource.
